

PRACHI GUPTA

Product & Data Analytics | SQL · Python · Tableau | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | [Medium](#)
Harrison, NJ (EST) | prachigt113@gmail.com | +1 862-231-9537

OPT authorized · STEM extension eligible (36 months)

EDUCATION

Pace University, Lubin School of Business — New York, NY <i>MBA, Business Analytics GPA: 3.95</i>	May 2026
Symbiosis College of Arts and Commerce — Pune, India <i>MA Economics GPA: 7.5 / 10</i>	June 2018
Delhi University — Delhi, India <i>B.Com (Hons) GPA: 7.9 / 10</i>	June 2016

RESEARCH & PRODUCT WORK

"Lost in the Learning Loop" — Independent Mixed-Methods Study	Feb 2026 – May 2026
- Ran independent mixed-methods study (survey n=20, moderated interviews n=4) on learning abandonment; identified four behavioral archetypes and isolated identity clarity as the single variable separating completion from dropout. - Translated findings into two product artifacts: a consumer Figma prototype (LINX: identity-first onboarding for LinkedIn Learning) and a B2B enterprise concept (LINX for Teams: pre-enrollment identity layer for L&D managers). - Designed Linx, a conversational AI assistant with five dialogue states and branching diagnostic logic; defined functional requirements, conversation flow, and fallback behavior in PRD documentation. Architecture concept follows a RAG approach, user identity profile from onboarding becomes the retrieval query against the course catalog, with LLM-generated recommendations grounded in real catalog data rather than generic output. - Research insight directly informs AI personalization design: identity clarity is the behavioral signal that distinguishes completers from dropouts and the variable a well-designed retrieval layer should optimize for. LINX for Teams deliverables: PRD with personas, user stories, MoSCoW prioritization, 30/60/90 success metrics; Agile Sprint 1 plan with story point estimates across UX Design, Frontend, Backend, and QA; UML use case and activity diagrams for three actors (Line Manager, Employee, L&D Manager); 18-screen Figma prototype across two flows. - Defined pilot metrics anchored to ATD and CIPD benchmarks: 13pp improvement in course completion, 15pp reduction in Week-2 abandonment across 80-employee enterprise cohort.	

SKILLS

Analytics & Data: SQL · Python (Pandas, Matplotlib) · R · Tableau · Power BI · Excel · Statistical Modelling · Regression Analysis · A/B Testing
Research Methods: Moderated Interviews · Survey Design · Usability Testing · UAT · Competitive Analysis · Thematic Analysis · Affinity Mapping · Mixed Methods
Product & Tools: Figma (Wireframing · Prototyping) · Salesforce CRM · HTML/CSS · User Journey Mapping · Onboarding Design · Retention Analysis · KPI Development · Requirements Gathering · PRD Writing · Agile/Scrum · Product Lifecycle · Sprint Planning · B2B SaaS
Generative AI: Familiar with LLM-based product design and RAG architecture principles; applied in LINX AI assistant concept. Tools: Claude · ChatGPT · Prompt Engineering
Certifications: Google Analytics Certified · Bloomberg Market Concepts

PROFESSIONAL EXPERIENCE

StoriedData Inc. (GUUT) — Data Analyst Intern <i>New York, NY</i>	Jun 2025 – Dec 2025
- Conducted competitive analysis across 6 analytics platforms against defined focus areas; produced a prioritized feature gap brief presented to stakeholders for roadmap review. - Evaluated platform features from a user perspective; created tutorial documentation identifying and resolving navigation friction points for client-facing use.	

Deloitte USI — Data Management Analyst

Feb 2022 – Aug 2023

Bengaluru, India | EU & APAC Client Delivery Team

- Ensured weekly KPI dashboard delivery for 8-person EU partner team; validated data accuracy and flagged errors prior to distribution, supporting executive decision-making across Power BI and Salesforce.
- Supported alignment between business requirements and data delivery; flagged data discrepancies and process errors to maintain integrity across live partner dashboards.
- Administered ETL pipeline operations in SQL and Informatica supporting new client onboarding across the EU partner team; enforced data quality standards across extraction, transformation, and validation stages.

GlobalData Research Center — Economic Research Analyst

Nov 2019 – Feb 2022

Hyderabad, India

- Built Tableau dashboard tracking 20+ economic indicators across 90+ countries; iterated on design through structured stakeholder feedback rounds, an applied product iteration process before the term existed in my title.
- Tracked COVID-19 economic impact across 45+ nations, managed live data, version control, and stakeholder communication simultaneously under deadline pressure.

KEY PROJECTS

LINX: LinkedIn Learning Redesign | Figma · UX Research & Design

2026

- Designed identity-first onboarding flow, context-aware AI chatbot (Linx), and Module 2 retention trigger (Commitment Echo), grounded in original mixed-methods research on learner abandonment. Linx concept uses a RAG-based architecture: diagnostic conversation states drive retrieval from the course catalog, with LLM output grounded in real data. Full interactive prototypes live on Figma.

Learner Journey: OULAD Analytics | Tableau · Python

2026

- Analyzed 32,593 learners; reframed the problem from student failure to course design failure. Withdrawal rate exceeded failure rate, a finding that changes where intervention should happen. Live on Tableau Public.

Labor Market Strategic Framework | Tableau · BLS JOLTS Data

2025

- Engineered three custom workforce metrics across 126 months of BLS data. Key finding: Healthcare requires 2.3× the recruiting effort of Construction, enabling sector-specific workforce expansion decisions.

Germany Energy Transition Analysis | Python · Jupyter

2025

- 17-year regression across four industrial sectors. Electricity costs explain only 13–19% of output decline (R^2 0.13–0.19) analytical rigor over hypothesis confirmation, across 57 sources.

Thyroid Cancer Risk Prediction | R Programming

2025

- Random Forest on 3,700+ patient records; 71.74% accuracy. Radiation exposure, iodine deficiency, and family history emerged as dominant predictors.
